

Secure E-Signature with CipherPost Pro

Because not all business happens around the conference table...

The world is shrinking. Technology allows you to conduct business with people on any continent at any time. But even though you can conduct high definition meetings across the wire, what happens when you need a signature? Does your fax machine even work anymore? The answer, of course, is e-signature, a feature that's now available with every CipherPost Pro[®] mailbox. E-signature provides unprecedented security and convenience when dealing with secure documents that require a signature, whether you're across the street or in a different hemisphere.

CipherPost Pro e-signature advantages:

- Secure
- Easy to use
- Simple to sign
- Branded to suit your business
- Requires no special software
- Integrated into your email client
- Full mobile functionality
- Compliant with data jurisdiction by storing documents in your region
- Enhanced e-discovery
- Dedicated cloud service
- Non-repudiable
- Integrates with your SSO deployment
- Total message control
- Real-time activity alerts and timeline insights
- Securely exchange and sign large files
- Reduced software costs
- Reduced courier costs
- No paper to file or maintain
- Provides instant verification
- Free, fully functional 30-day trial
- No contractual commitments required now or later
- Phenomenal Care[®] support

Secure E-Signature with CipherPost Pro

Let's use technology to solve problems.

Given the massive benefits of developing a legitimately viable click to acknowledge marketplace, many countries have passed various laws to encourage the adoption of e-signatures as valid. The E-SIGN Act in the U.S., for example, is meant to “facilitate and promote commerce and governmental transactions by validating and authorizing the use of electronic records and electronic signatures.” In most cases, though, the laws stipulate that any electronically signed document must be securely protected throughout the exchange.

Until now, no one has been able to offer true stand-alone secure file-exchange capability without an added layer of additional software or hardware. You either had to compromise on security in favor of ease-of-use and lower implementation costs, or shell out for the added cost and weight of full-encryption capability.

With the AppRiver CipherPost Pro[®] e-signature optional feature, there are no compromises required and no additional hardware or software required to ensure security. You can seamlessly and securely sign and exchange a full range of document types simply by typing your name and clicking a button—all from within your email program and in a matter of seconds.

Who needs secure e-signature?

The short answer is everybody. Whether it's signing and exchanging contracts, medical records, or financial information, businesses and organizations of just about any size need to exchange signed documents. And by the very nature of the intent of a signature, that information is usually important, sensitive, confidential or all three.

You need AppRiver's CipherPost Pro e-signature solution because it is simple, secure and easy for anybody to understand and use. It supports major document formats, including PDFs and Microsoft[®] Office files, as well as most common image formats (JPG, PNG, etc.), with few restrictions on file size transfers.

Whether you need to send anything from complex agreements to digital blueprints to x-rays, you can obtain the required signatures literally in seconds with CipherPost Pro.
