# THE AVERAGE BEC ATTACK COSTS $43K. CAN YOUR BUSINESS REALLY AFFORD TO NOT HAVE IMPERSONATION PROTECTION WITH EMAIL SECURITY?

Running a business is stressful enough in this economy. There was a time when you only needed to worry about a few suspicious email messages in your inbox. Now, any message could be a potential phishing threat lurking in your inbox. It only takes one email to trick your employees and penetrate your network. AppRiver's Advanced Email Security blocks 99 percent of unwanted mail and malware, keeping your inbox clean and your network safe.

Our Threat Intelligence technology relies on the AppRiver security platform and expert human analysis to identify threats and evolve our defenses in real time, keeping our customers safe from brand-spoofing attacks, Business Email Compromise (BEC) attempts, conversation hijacking, and other potentially harmful forms of social engineering.

Impersonation Protection

Email Security defends businesses and trusted individuals from targeted email attacks such as Whaling or BECs. Our technology checks deceptive email address sources against key display names and quarantines the message or flags the message with a customizable indicator in the subject line.

If sender is determined to be legitimate, message is sent to the intended recipient.

Email is sent to your Accounts Payable Department asking for immediate remittance of payment past due.

AppRiver Email Impersonation determines if message is legitimate.

If message is suspect, it is quarantined or flagged as suspicious protecting the recipient from a potential malicious attack.
